The Digital Media program encompasses a variety of creative or artistic activities that are done with the aid of a computer: imaging, illustration, animation, interactive scripting, and video editing. Students learn to use the industry's leading software applications (such as Adobe Photoshop and Apple's Final Cut Pro), and work their way toward creating professional-level projects. We seek to instill in our students an appreciation for digital media as an important way to communicate ideas to others. We seek to prepare students to be media experts, skillful with state-of-the-art visual, graphics, and interactive software used by artists, photographers, filmmakers, and web designers.

The Film program, new this year, trains students in film writing and production. Because it's still in its infancy (with one part-time faculty member), and because it shares resources with Digital Media, we're considering Film to be part of this unit as well.
