The Chabot College Astronomy, Geology and Physics (AGP) unit offers a wide spectrum of physical science courses that enlighten and prepare our students for further study in almost any field. Understanding science is absolutely key to understanding and meeting the challenges of our increasingly complex world, as much for students majoring in the humanities and liberal arts as for those majoring in mathematics, engineering, science, or technology. In this context, AGP’s mission is to assist Chabot’s students as they seek to transfer to four-year institutions or obtain an Associate’s Degree, and to offer opportunities for developing basic scientific literacy, personal enrichment, career preparation, job advancement and retraining.

In addition, this unit also oversees the Chabot College planetarium, which is an absolute jewel for the campus and community. The planetarium facility is currently planned to be renovated under Measure B Bond funds in 2008-2010.
