

Chabot College
Course success and withdrawal rates, by courses and students
Fall 1997 to Fall 2010
All students

Success rates have been very stable at Chabot—since Fall 1997 they have not fluctuated by more than two percentage points around a success rate of 65 percent. However, in Fall 2010, success rates reached a high of 68 percent. Non-success rates rose from an average of 12 percent to 16 percent in the last three years. Withdrawal rates have also been stable at about 22 percent for years, but dropped six percentage points over the last three years to 16 percent in Fall 2010. Similarly, the percentage of students who withdrew from all courses dropped from a previous high of 20 percent to only 10 percent in Fall 2010. Students are now more likely to stay enrolled in their classes, whether they are succeeding or not.
