**Course success and withdrawal rates, by courses and students**  
**Fall 1998 to Fall 2013**  
**All Students**

Between Fall 2011 and 2013, Chabot students had higher success rates and lower withdrawal rates than anytime in the last 15 years. Success rates, traditionally stable at 65-67 percent, rose to 69 percent in Fall 2013. Withdrawal rates, stable at 22-23 percent, dropped to 16-17 percent in the last five years. In addition, the percentage of students who withdrew from all their courses fell from 6 percent in the late 1990's to 4 percent in Fall 2013. However, non-success rates (D, F, No Credit, No Pass, or Incomplete) have gone up slightly from an average of 12 percent during the early 2000's to 15 percent in Fall 2013. Compared to the late 1990's and early 2000s, students are now more likely to stay enrolled in their classes, whether they are succeeding or not.
