Persistence Rates of New Students by Student Success Services

Fall 2016 to Spring 2017 through Fall 2021 to Spring 2022

Term to term persistence rates are defined as the percentage of students enrolled in the first term who are subsequently enrolled in the following term. On average, over two thirds of new Chabot students enrolled in the Fall semesters persist to the Spring semesters. The persistence rates of new students who received the student success services of orientation, placement/assessment, and counseling had higher persistence rates than those without the services. Students with any types of Student Education Plans (Comprehensive SEPs, Abbreviated SEPs, or both) persisted at higher rates than those with no SEPs.
