

College-going Rates of Local Public High School Graduates: Fall After Graduation

All California, Alameda County, and Chabot College Area High Schools

by High School Graduation Year and Type of California Public College Attended 1996-1997 to 2006-2007

These tables show the percentages of California public high school graduates who attended California public colleges—California community colleges, CSU, and UC—in the Fall after their graduation during the years of 1996-1997 to 2006-2007. Compared to the previous year, in 2006-2007 the percentage of high school students enrolled in any community college increased by one percentage point in all of California to 31 percent and decreased by three percentage points in Alameda County to 34 percent. In addition, there was a one percentage point increase among the graduates of Chabot's major local high schools who attended any community college to 40 percent. The percentage of local high school graduates who enrolled at Chabot also increased by one percentage point to 28 percent.

Since 1996-1997, the overall state percentage of high school graduates enrolling at a CSU has slowly increased by three percentage points to 12 percent, and the percentage enrolling at a UC has been stable at seven to eight percent. Graduates from Chabot high schools, who traditionally have higher enrollment rates into CSU than the state and county, increased their enrollments to CSU in 2006-2007 by two percentage points to 19 percent. These students, however, decreased their enrollment to UC by two percentage points to 11 percent, which is above the state rate, but slightly below the county rate. Aside from a small percentage who chose private or out-of-state colleges, about 25 percent of local high school graduates did not attend college in the Fall after graduation.
