Math Guided Self-Placement

Introduction

Most California community colleges used to rely on standardized assessments to place new students in mathematics, and often students are placed in courses that repeat content from high school. With the passage of AB 705, Chabot College has adopted the recommendations from the California Community Colleges Chancellor's Office to place all students into first-level transfer math courses by default. In this guided self-placement, we will

- use your education goal, high school GPA, and course completion to help you choose among first-level transfer math courses.
- provide options to place above first-level transfer based on high school course work, other college-level coursework, or standardized examination.
- give examples of expected incoming skills for Chabot courses to help you decide if below-transfer courses are right for you. For a vast majority of students, placement below transfer-level is not advised. You are advised to start in a transfer-level course using support services and dedicating substantial amount of study time, rather than to repeat high school coursework. Ultimately, you know yourself best, and the choice is yours after reviewing the material in this guided self-placement.

If you have coursework from another college that can place you higher than the result of this self-placement process, please bring verification to a counselor. Also go back to see a counselor if you have passing score in AP Statistics Exam, AP Calculus AB/BC Exam, or IB Mathematics HL Exam for course credit and higher placement. If you have new exam scores that come in over the coming summer, bring them in ASAP!

*** Required field.**

If you don't have your transcript or are from a different education system, you can use your best guess for an equivalent GPA.

If you have a high school equivalency, use [this table to convert your average GED or HiSET score to an equivalent GPA](#). If you are no longer attending high school and your high school GAP does not include at least the equivalent of 4 semesters of full-time high school coursework, you are encouraged to see a Counselor to discuss your situation, as the research on placement rules for transfer-level math course does not extend to such limited amount of high school work.

Please select a value between 0.0 and 4.0 in the below box. If you are still in high school, enter your cumulative GPA as of the end of 11th grade. If unsure, please estimate.

* Enter your unweighted High School GPA:

Math Guided Self-Placement

For each of the following high school math courses in a sequence that lead to calculus, check the statement that best describes you. The courses are listed from low to high level. If you don't have your high school transcript or if you are not familiar with the content of these courses, you can click on the course title to see examples of the content in that course to help you choose the best statement. If you were educated abroad, please choose an answer that is equivalent to your math experience.

[Example Problems for high school first-year algebra](#)

[Example Problems for high school geometry](#)

[Example Problems for high school second-year algebra](#)

[Example Problems for high school precalculus](#)

[Example Problems for high school calculus](#)

* Integrated Math 1 or First-Year Algebra (Algebra 1, Elementary Algebra, or similar courses.)

* Integrated Math 2 or Geometry

* Integrated Math 3 or Second-Year Algebra (Algebra 2, Intermediate Algebra, or similar courses.)

* Advanced math leading to calculus: Precalculus, Integrated Math 4, Trigonometry, or similar courses. Do not include trigonometry if it is part of your Algebra 2 course. Do not include statistics.

* Calculus

Math Guided Self-Placement

Options for Math Course

You are eligible for first-level transfer math course by default.

Based on high school transcript, some students are recommended an additional support course for these transferable courses. Depending on the course, the support course includes one to three more hours of classroom instruction covering just-in-time review, classwork to reinforce concepts, or other support activities.

Support courses have a W suffix. Whether you are recommended additional support course or not, the support course is available to you, and you can opt to take the transfer-level course without support. Based on your high school transcript.

For SLAM (Statistics and Liberal Arts Math) math courses, the support course is not required for you.

For vast majority of students, below-transfer math courses are NOT recommended. A common reason to take below-transfer math is not having completed an algebra course with a C or higher in either high school or college. Click [below-transfer options](#) for more information.

- MTH 41 Number System (3 units. Does not satisfy the Math requirement for UC.)
- MTH 41+41W Number Systems (3.5 units. Does not satisfy the Math requirement for UC.)
- MTH 47 Math for Liberal Arts (3 units)
- MTH 47+47W Math for Liberal Arts (3.5 units)
- Statistics offered in different departments:
 - MTH 43 Introduction to Probability and Statistics (4 units)
 - MTH 43+43W Introduction to Probability and Statistics (4.5 units)
 - PSY 5 Introductory Statistics for the Behavioral and Social Sciences (4 units)
 - PSY 5+5W Introductory Statistics for the Behavioral and Social Sciences (4.5 units)
 - BUS 19 Business Statistics (4 units)

For BSTEM (Business, Science, Technology, Engineering, or Mathematics) math courses, the support course is not required for you.

This presumes you have completed at least Algebra 2 or Integrated Math 3 in high school with C- or higher; if not and you want to pursue BSTEM fields, consider [below-transfer options](#)

- MTH 31 College Algebra (3 units)
- MTH 31+31W College Algebra (4 units)
- MTH 36 Trigonometry (3 units, but only available to students who have completed UC-approved geometry in high school, as an alternative to MTH 37.)
- MTH 37 Trigonometry with Geometric Foundation (5 units)

Notes about Support Course

- A support course has the suffix W attached to the same number as the corresponding transferable course. For example, if you wish to take MTH 43 with support, you will sign up for both MTH 43 and MTH 43W.
- For math courses, a section of a support course is paired with a specific section of the corresponding transferable course. You cannot mix the transferable section in one pairing and a support section in another pairing.
- For PSY 5, however, the support course PSY 5W can be taken with any section PSY 5.
