

# Chabot College Student Satisfaction Survey: Fall 2015

## Highlights

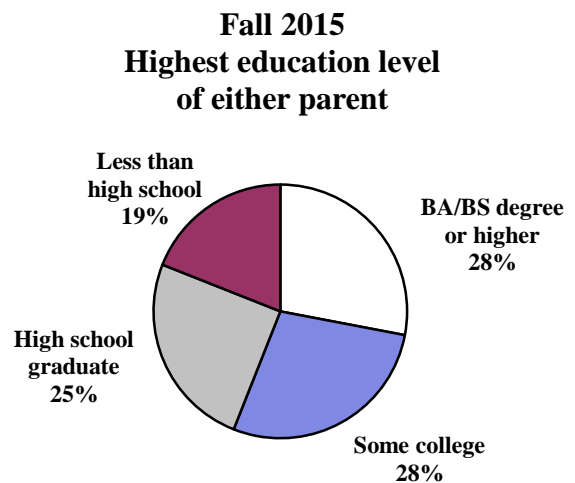

### Family Income, Parent's Education and Living Situation

In 2015, 36 percent of Chabot students had very low incomes according to national standards and another 20 percent had low incomes based on local standards. This means that almost sixty percent of Chabot students are low-income.

In addition, 70 percent of the students live with their parents, and 44 percent are in the first generation of their family to attend college.

The Student Satisfaction Survey was conducted in October 2015 in a representative sample of 81 course sections. Surveys were completed by 1,667 students (56% full-time; 44% part-time). Responses were all anonymous.

The Student Satisfaction Survey collects student demographic data that is not otherwise available, such as family income, parents' education, childcare needs, and living situations. This information is used to plan services and grants that respond to our students' needs.

Notes: Family income was self-reported and adjusted by household size.

Very low income is defined by the US Department of Health and Human Services as income earned up to 150% of national poverty level. Low income is defined as about 50% of local median income by the US Department of Housing & Urban Development.

**NOTE: All percentages have a margin of error of 1 to 3 percentage**
